Exploitation Using MSF Payloads

Objectives

Go back to previous labs, but this time instead of using the given payload which generates a message box, use the shellcodes you learned to generate in lab#18.

Part #1 – Exploiting VUPlayer using Different MSF Payloads

Using Metasploit, test the exploit you wrote for the VUPlayer but this time with other payloads such as a **reverse_tcp** and **meterpreter**. Adjust your python exploit to include the new payload you created.

Deliverable #1: submit the commands and the final code used

Part #2 – Exploiting miniHTTPd using Different MSF Payloads

Using Metasploit, test the exploit you wrote for the miniHTTPd Server but this time with other payloads such as a **reverse_tcp** and **meterpreter**. Adjust your python exploit to include the new payload you created.

Deliverable #2: submit the commands and the final code used

Deliverable #3: Please reflect back on what you learned from this assignment.
